AIRPORT WELLNESS SOLUTIONS

NimbusPod

SLEEP SPOT
MASSAGE SPOT

Comfort for passengers. Value for airports.

The world's leading airports of the future will no longer be judged solely by the number of destinations they serve. They will be remembered for how passengers felt during their time there.

Not long ago, airport terminals were simply places to pass through. Today, they are becoming spaces that shape the travel experience. As passengers spend more time at airports, services that enhance comfort, well-being, and the overall journey are becoming increasingly important.

Waiting time becomes added value.

The unique Zero Gravity position provides maximum relaxation while resting in ergonomically designed MESSAGE SPOT and SLEEP SPOT.

NimbusPod responds to this shift by creating innovative wellness zones where passengers can relax, recharge, and continue their journey feeling refreshed. It is a solution that benefits both passengers and airports seeking to expand their non-aeronautical services while enhancing the overall passenger experience.

Every journey begins long before boarding. Fatigue, stress, long hours of driving, or an overnight connection often leave passengers exhausted. Even a short period of rest can significantly improve their comfort and well-being. Passengers choose the duration of their session and can extend it at any time. A private relaxation space offering a moment of peace, recovery, or a short nap in the secluded environment of an open capsule.

MESSAGE SPOT

MESSAGE SPOT is more than just equipment. It is a passenger service that transforms waiting time into a positive experience, leaving passengers with the impression of a welcoming and innovative airport. An ergonomic massage chair that provides quick muscle relaxation, relieves neck and back tension, and offers a moment of relaxation before continuing your journey.

SLEEP SPOT

SLEEP SPOT is Europe's first commercial open-concept sleep and relaxation space, available to all passengers throughout all airport zones.

Comfort as a Service.

NimbusPod is more than an equipment supplier. We operate a fully managed Airport Wellness service, providing airports with a turnkey solution that requires no operational involvement from airport teams.

Our revenue-sharing partnership model requires no CAPEX from the airport. Underutilized terminal space is transformed into a premium passenger service and a new source of non-aeronautical revenue.

As the European pioneer in airport wellness, NimbusPod's sleep and massage zones are setting a new benchmark for passenger experience while ushering in a new era of commercial airport services.
